[PRINCIPLES OF EUROPEAN CONSTITUTIONAL LAW (A. Von Bogdandy & J. Bast eds., 2006); ISBN: 1841138223 / 9781841138220, 810 pp., £ 150.00]

A. Introduction

Recently the German *Bundesverfassungsgericht* (Federal Constitutional Court) knocked on the European Union's door with its impressive judgment on the Lisbon Treaty, recalling all the weight of the German scholarship tradition steeped in the German dogmatic flavor: the attention to the history of sovereignty and the attempt to catch all the European Union constitutional system's life revealed the systemic approach peculiar to the German dogmatic scholarship.

Another way to frame that judgment could be to think that the *Bundesverfassungsgericht* advocates a German way for the European Union (EU), which neglects the EU peculiarity and pushes for a nearly impossible legal transplant to the supranational level.

The third way one could propose to approach such a pronouncement is to start from the book I am going to review, in order to have a valid toolbox from which the "brave" reader of that ruling could get the conceptual apparatus necessary for such a demanding reading.

This volume represents the translation, with some changes, of a book previously published in Germany,² where its second German edition has been recently published. Because of the well known content of this book – it has already been reviewed in the most prestigious journals, *Common Market Law Review*, *European Journal of Contemporary Research and European Law Journal*, among others – and given the length of that work, I will limit myself to a brief overview of the papers included, devoting a few pages to the general connecting threads of the volume.
